

INNOVATIVE NEW ELECTRIC VEHICLE-HIGH POWER PLAN OFFERS BILL STABILITY

Businesses, transit agencies and school districts that are considering making a switch to commercial electric vehicles are now able to take advantage of SDG&E's Power Your Drive for Fleets program. Its innovative pricing plan, the Electric Vehicle-High Power (EV-HP) rate, makes it possible to reap both financial and environmental benefits by powering fleets with electricity. Businesses that sign up for the

plan can choose the level of power to subscribe to for their charging needs and pay for it with a fixed monthly subscription fee.

The EV-HP pricing plan also enables businesses to save by charging during times of the day when demand for electricity is low or renewable energy generation is high. Charging during grid-friendly hours ensures that the growing adoption of electric-powered equipment doesn't strain the grid during peak periods and require costly grid enhancements.

The adoption of the EV-HP rate complements SDG&E's Power Your Drive for Fleets Program to build charging infrastructure for a minimum of 3,000 plug-in medium-duty and heavy-duty electric vehicles and equipment, including transit buses, school buses, delivery trucks and forklifts. This initiative also supports the electrification of refrigerated semi-truck trailers, which are vital for transporting perishable goods. For more information, visit sdge.com/EVfleets.
