

The Right Tool for the Right Job

Do you really know what jobs make you money?

How difficult is Job Costing?

On the Polaris System...Child's Play!

Running a business on a computer that is not designed for your industry puts your company at risk. As with any job in the shop, you need the right tool. Polaris Systems, Inc. provides the right tool to do the job. Whether you're a custom machine shop or production engine rebuilder, big or small, Polaris Systems, Inc. has the right Lenovo computer for you.

With over 20 years of product design experience, Polaris continues to work closely with leading companies to deliver industry-specific systems to meet their unique requirements. Imagine if you were able to accurately cost every job that comes out of your shop. You would be able to quickly turn losers into winners. With Polaris, you'll see which jobs are losers and why. You might discover that a particular tech is taking much too long on a particular job. Imagine how many jobs in your shop may go out...without the parts billed on the work order. Polaris helps you turn losers into winners, which improves your bottom line.

Polaris helps you deliver the best possible service. No more running around the shop to see if the customer's job is completed. With a touch of a button, your customer's job displays each job step, the status, and who is working on it. If the job is on hold, it tells you why so that you can keep your customer informed throughout the life cycle of the job. It is much like having an additional employee to help you maintain the status of every job.
